### 2.4 Quadratic Regression DAY THREE CYU

$\square$ Use when you get it right all by yourself
$\boldsymbol{S}$ Use when you did it all by yourself, but made a silly mistake H Use when you could do it alone with a little help from teacher or peer
$\boldsymbol{G}$ Use when you completed the problem in a group
X Use when a question was attempted but wrong (get help)
$N$ Use when a question was not even attempted

| CONCEPTS | BASIC | INTERMEDIATE | ADVANCED |
| :--- | :---: | :---: | :---: |
| Finite Differences | 1 a |  |  |
| Graphing Quadratics | 1 b | 2 a |  |
| Labeling a Graph | 1 b | 2 a |  |
| Writing a Quadratic <br> Model (calculator) | 1 c | $2 \mathrm{~b}, 3 \mathrm{a}$ |  |
| Finding the Maximum <br> Height | 1 d |  |  |
| Finding when an object <br> hits the ground | 1 e |  |  |
| Finding Initial Height | 1 f |  |  |
| Prediction |  | 2c, 3bc |  |

1) The data in this table represent the height of an object (in meters) at different times (in seconds) during flight.

## Object

| Time $(\mathrm{s}) \mathrm{t}$ | 0 | 1 | 2 | 3 | 4 | 5 | 6 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Height $(\mathrm{m}) \mathrm{h}$ | 4 | 63.1 | 112.4 | 151.9 | 181.6 | 201.5 | 211.6 |

a) Calculate the finite differences for the data. What degree polynomial function would you use to model the data set? (first difference: linear, second difference: quadratic)
b) Graph the data. Be sure to label the axes.

c) Write a polynomial function to model the data set. Check your polynomial by checking it against the given data set. (Do quadratic regression on your calculator.) $f(x)=$
$\mathrm{a}=$
$\mathrm{b}=$
$\mathrm{c}=$
d) What is the maximum height of the object? $\qquad$

$$
(\quad, \quad)
$$

e) When did the object hit the ground? $\qquad$
f) What is the initial height of the object? $\qquad$
2) The table below shows the number of calories burned in 1 hour when running at various speeds.

| Running Speed (mph) | Calories Burned |
| :--- | :--- |
| 10 | 1126 |
| 10.9 | 1267 |
| 5 | 563 |
| 5.2 | 633 |
| 6 | 704 |
| 6.7 | 774 |
| 7 | 809 |
| 8 | 950 |
| 8.6 | 985 |
| 9 | 1056 |
| 7.5 | 880 |

a) Plot the data below. Be sure to label the axes.

b) Write a quadratic function to model the data set. Check your polynomial by checking it against the given data set.

$$
\begin{aligned}
& f(x)= \\
& \\
& \mathrm{a}=\quad \mathrm{b}= \mathrm{c}=
\end{aligned}
$$

c) How many calories does this model predict a person who runs at 9.5 mph for 1 hour will burn? Round to the nearest calorie.
3) The fuel efficiency, in miles per gallon, for a certain midsize car at various speeds, in miles per hour, is given in the table below.

Fuel Efficiency of a Midsize Car

| mph | mpg |
| :---: | :---: |
| 25 | 29 |
| 30 | 32 |
| 35 | 33 |
| 40 | 35 |
| 45 | 34 |
| 50 | 33 |
| 55 | 31 |
| 60 | 28 |
| 65 | 24 |
| 70 | 19 |
| 75 | 17 |

a) Find a quadratic model for these data.

$$
f(x)=
$$

$\mathrm{a}=$
$\mathrm{b}=$
$\mathrm{c}=$
b) Use the model to predict the fuel efficiency of this car when it is traveling at a speed of 57 mph .

Ans. $\qquad$
c) Use the model to predict the fuel efficiency of this car when it is traveling at a speed of 78 mph .

Ans. $\qquad$

## CYU Reflection: How far can you go: basic, intermediate, or advanced? Rate your mastery level!

How confident are you with the skills this CYU covered? Circle the score you would give yourself.
