

4.4 Congruence & Transformations

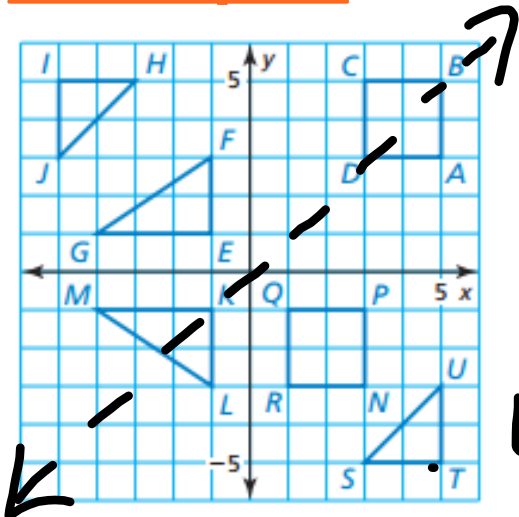

Congruent

NOT Congruent

Figures

Example: Name congruent figures.

$\triangle IJH \cong \triangle TUS$ *rotation 90°*
 $\triangle IJH \cong \triangle TSH$ *reflection y=x*
 $\triangle FEG \cong \triangle LKM$ *reflection x-axis*
 $\square CBAD \cong \square QPNR$ $(x,y) \rightarrow (x-2,y-6)$

Practice: Name congruent figures.

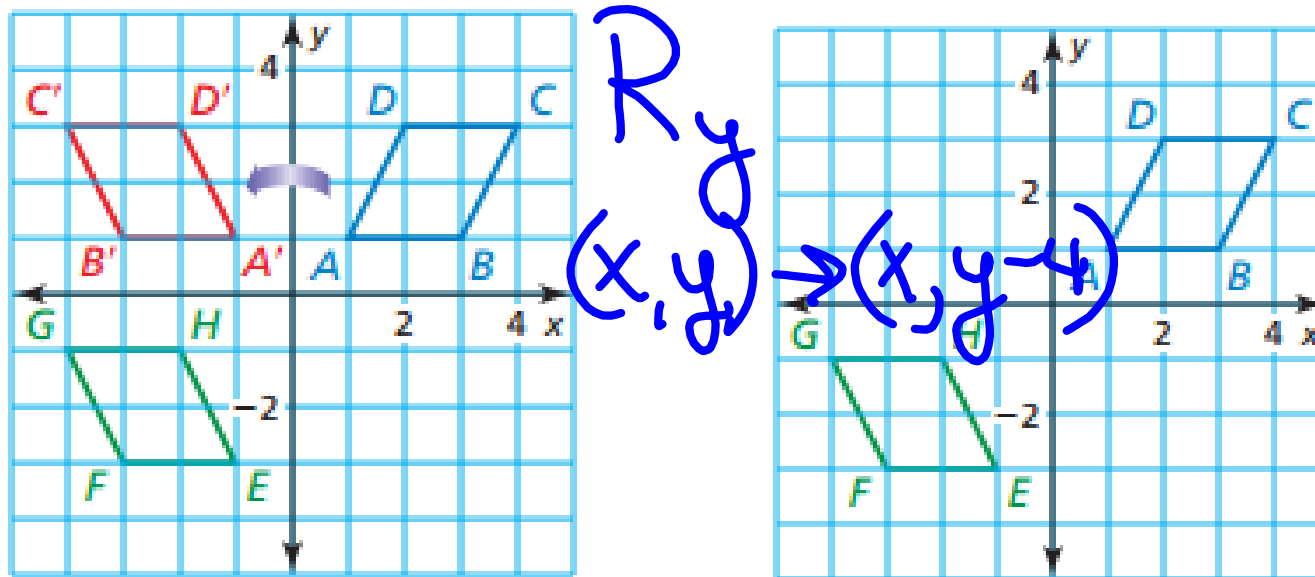

$\triangle LKM \cong \triangle TSH$ *reflected over y-axis*
 $\triangle CBA \cong \triangle FED$ *rotation 90°*
 $\square IHGJ \cong \square QPNR$ $(x,y) \rightarrow (x+2,y-6)$

Congruence Transformations

Mapping how you get from one object to another object. Sometimes it can be a composition of transformations and sometimes it is one transformation. Multiple answers can be possible!

EXAMPLE: How do you get from Blue to Green?

HINT: move graph to check

Practice: Go from blue to green again!

Reflect over x -axis
Translate $(x, y) \rightarrow$
 $(x+5, y+0)$

ACT Practice:

At a buffet restaurant, the price for dinner for an adult is \$6.95 and the price for dinner for a child is \$3.95. A group of 8 people went to the restaurant for dinner and paid a total of \$46.60, excluding tax and tip. How many adults were in the group?

A. 2

B. 3

C. 4

D. 5

E. 6

$$\begin{aligned} a &= \text{adult} \\ c &= \text{child} \end{aligned}$$

$$6.95a + 3.95c = 46.60$$

$$a + c = 8$$

$$c = 8 - a$$

$$6.95a + 3.95(8 - a) = 46.60$$

$$6.95a + 31.60 - 3.95a = 46.60$$

$$3a + 31.60 = 46.60$$

$$\begin{array}{r} 3a + 31.60 = 46.60 \\ -31.60 \quad 31.60 \\ \hline \end{array}$$

$$\begin{array}{r} 3a = 15 \\ \hline a = 5 \end{array}$$
