REASONING:

20.) Which method can't you use to solve this problem? $x^2 - 47 = 0$

Circle one: Factoring Completing the Square Quadratic Formula

Explain why: none!

21.) Which method can you use to solve all quadratic equations?

Circle one: Factoring Completing the Square Quadratic Formula

Explain why: Always works the easiest, find a,b,c!

22.) What are the **two mistakes** in setting up the quadratic formula?

Solve: $2x^2 - x - 6 = 0$
